- *Saves on energy costs*
- *Permanent – does not sag*
- *Keeps dust and pollen out*

- Ceilings
- Walls
- Floors
- Windows & Doors
- Basement
- Foundation

SEALITE™ is a new generation, spray-in-place foam insulation developed by NCFI to make homes more comfortable while reducing energy costs.

You will be more comfortable because SEALITE seals the hundreds of feet of cracks found in a new home, stopping drafts of unconditioned air entering your living space. SEALITE's ability to conform to irregular shapes means greater comfort when employing unusual design elements.

**SEALITE is an open cell cellular plastic. It is water blown and contains no formaldehyde. SEALITE's energy saving performance means less gases to the atmosphere. SEALITE does not sag over time like traditional insulation. This long term product stability assures continued savings on heating and cooling your home.**
